SAFE QUICK STRONG SMART™

2013

GunVault®

Security

GunVault® - Safe Quick Strong Smart™

GunVault is the industry leader and innovator in developing a full line of highly reliable, quick-access safes designed not only for securing firearms, but for personal items and valuables, as well. With products engineered to fit a variety of storage and access requirements, GunVault safes are resistant to pry attacks and operate with a high-strength lock mechanism—instantly accessible with choices of keyed, touch-pad combination or biometric fingerprint technology.

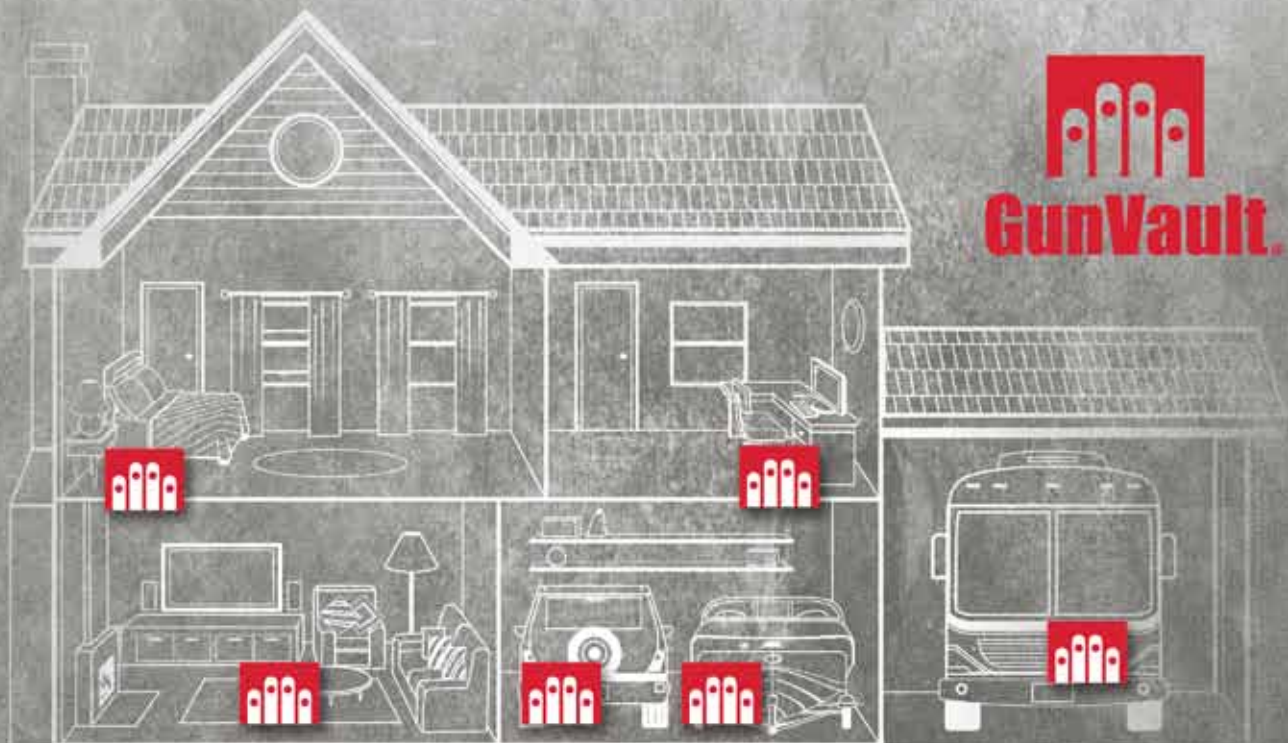

GunVault® - A Safer Way of Living

Choosing a safe with quick access to protect valuables or store a firearm is one facet of prioritizing the safety of you and your family; simply adopting a mind-set of strategic-yet-convenient whole life safety is the next step.

Consider your typical day—from the time you wake-up until the time you go to bed. What are the patterns you follow regarding placement of your wallet, watch and keys while at home and when asleep? Will a single safe give you the immediate and convenient access you need to items you use daily, but need to keep secure—or are multiple safes the answer? Is there a single best place to keep your handgun or do you need to locate several at various strategic locations? Now consider your vehicle, RV or boat ... and your office or place of work.

The pages of this catalog are designed to help you answer your GunVault questions by providing options for securing your prized possessions while you're away and for offering instant access to a firearm while you're at home, at work or in your vehicle—all with trademark security, convenience, affordability and accessibility.

To help you design a GunVault system of your own, we've illustrated some common living areas in a typical home or apartment, including autos and recreational vehicles. Use it as a guide to help develop a simple-yet-strategic storage and access plan that fits your own lifestyle.

NEW

TACTICAL SECURITY AT HOME OR OFFICE

As more people rely on AR rifles and tactical shotguns for home defense, the new TacVault is a secure storage solution that discreetly fits in most closets.

**TAC
VAULT**

BIO

“15 Years of Bio Technology”

What is GunVault® Biometric Technology?

BIOMETRICS: *“The measurement and analysis of unique physical characteristics (such as fingerprint patterns) as a means of verifying personal identity.” Merriam-Webster*

GunVault Bio® safes use biometric fingerprint recognition to unlock the safe and access contents. A high-performance algorithm is used to quickly learn and identify specific characteristics of authorized fingerprints. Each time GunVault biometrics scan an authorized fingerprint the algorithm learns additional details and data about the fingerprint to increase reliability, meaning GunVault biometrics actually get “smarter” with repeated use.

GunVault is the industry leader in biometric technology with over 15 years of experience and testing. As a result, GunVault biometrics have very low false acceptance rates (FAR) and false rejection rates (FRR), better ensuring dependability and that your valuables are accessed only by you.

CALIFORNIA DOJ APPROVED

The California Department of Justice is the standard for all other states when it comes to the regulatory standards required to store a handgun. GunVault’s products exceed these standards to give you peace of mind when securing your handgun or other possessions.

INCLUDED FREE IN SELECTED GUNVAULTS
